Every business starts with a vision. Ours is simple: We want to create the best possible dental implant solutions that offer uncompromising quality at an affordable price. It's our people that help our business thrive and grow. That's why we place so much importance on building strong personal relationships that enable us to meet our doctors' and distributors' needs. Understanding that their success is our success, we're focused on providing professional, high quality and affordable solutions and exceptional service that help them grow.

## Expertise

Our high-quality products, combine innovation with reliability and ease of use, are designed to meet your professional requirements and your patients' needs.

**With Adin, you have peace of mind.**

## Rewarding

Adin is focused on offering affordable solutions for patients and profitable solutions for dental professionals, without compromising on quality.

## Recognition

We take your success personally and are dedicated to serving your needs. We take pride in solving your challenges and devising innovative solutions. We're here for you, providing unmatched personal attention and exceptional service.

# Internal Hex

## ⑥ Internal Hex

Our Internal Hex connection implant systems - Touareg S/OS are tapered implants with a spiral tap designed to condense bone during placement for enhanced immediate stability. The two large variable threads & a tapered core enable accurate implant placement, self-tapping, improved aesthetics and better load distribution.

The Touareg™-OS & Touareg™- S implants both feature a special round apex that pushes the bone graft with minimal harm to anatomical structures.

The Swell™ - An Internal Hex connection, hybrid implant with parallel body and tapered apex, with a V-shaped thread design.

The Touareg™-OS, Touareg™-S & Swell™- implants are user friendly and their unique design often allows for immediate function.

# Touareg<sup>TM</sup> S/OS

Our most popular implant. Made for simple & streamlined use featuring a high stability mechanism & unique surface treatment with an Internal Hex connection.

**Stability** – Our Touareg<sup>TM</sup> implant features an active & dynamic self-drilling threads, engineered to provide ideal primary stability and immediate loading capabilities in all bone types. Designed for confidence & predictable procedures.

**One Connection** – All Touareg<sup>TM</sup> diameters and restorative parts connect with one unified Internal Hex Connection to simplify management of surgical & prosthetic procedures.

**OsseoFix<sup>TM</sup>** – A biocompatible surface treatment that uses gritting with Calcium Phosphate media that is debris free and has been designed to achieve the desired roughness levels needed for optimal osseointegration.

**AB/AE** – Provides roughened micro and nano-structure surface topography. This structure leads to optimal cell adherence and proliferation in the cavities of the roughened implant surface, significantly increasing the number of cells attached to the surface and is associated with a shorter healing time.

Single restoration system to simplify management of surgical & prosthetic components

Implant diameter  
 $\varnothing 3.5\text{--}6\text{mmD}$

Built-in platform switching

Immediate function capability

Designed to provide high primary stability in all bone types

Self drilling

Redirecting capability for optimal placement

**Micro Threads:**  
Engineered to enhance bone regeneration, prevent bone loss & increase bone implant contact

Minimally invasive surgery

Double lead threads 2.4mm(2×1.2)  
For fast & efficient insertion

Round apex

Touareg™-S

Recommended insertion torque up to 50 Ncm

## Drill Sequence

Recommended drilling speed up to 1200 rpm

All measurements are in mm.

\*For initial drilling, you may use Tri-step drill instead of  $\varnothing 2$ ,  $\varnothing 2.8$  and  $\varnothing 3.2$  drills in sequence.

# Swell™

The Swell™ - A hybrid implant with a parallel body, tapered apex and a V-shaped thread design.

Its unique design allows for accurate positioning, improved aesthetics and better load distribution. Recommended for use in the mandibular arch.

The Swell™ implant features Alumina Oxide Blasted/Acid Etched (AB/AE) surface treatment.

## Impression

Recommended Torque 15(Ncm)

Our components for taking impressions for all restoration types can be successfully utilized for digital or conventional protocols either implant-level or abutment level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge or full mouth rehabilitation.

## TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations and may be used in combination with an implant level framework design.

The TMA™ system is used to elevate the restorative seating platform when restoration at implant level is not indicated or practical due to the depth or angle of the implant.

The TMA™ System is designed to allow better prosthetics access when using implants with divergent angles accommodate full and partial edentulous arches, especially when using angled implants and all-on-x technique for full arch restoration.

The TMA™ abutment system is available in straight or angled (17°, 30°, 45°), engaging the Internal Hex for indexing, with a selection of collar heights. Abutments are delivered with handles for easy insertion and to assist with seating.

## Tri-Step & Twist Step Surgical Drills

Our DLC (Diamond Like Carbon) Tri-Step/Twist Step Surgical Drills are uniquely designed and coated to improve the surgical drilling process.

Tri-Step & Twist-Step DLC drills simplify the cutting process, save time and minimize risks.

Our improved DLC drill coating provides state-of-the art hardness and slickness that increases lifespan of the drill, maintains sharpness for extended drilling and generates less heat, thereby reducing chances of heating the bone or complications arising from conventional drilling protocols.

The drills come in the following diameters: 2.0, 2.5, 2.8, 3.2, 3.6, 4.2, 4.6, 5.2, 5.6

Specially designed for Adin's implants and suitable for their simple and convenient drilling protocol. They are clearly and conveniently marked and can be used with or without drill stops.

### Tri-Step drills

Adin's Tri-Step drills condense drilling protocols and avoid the need for using multiple drills throughout complex procedures.

Because friction at the cutting site is reduced, complications common with high speed drilling are decreased and faster & better recovery can occur.

## Surgical Kits RS standard Hex

Successful surgical procedures start with having the right instruments and tools to ensure your desired treatment outcomes are met.

That's why our range has everything you need, including drills, keys, ratchets and insertion tools. Not only do they make procedures safer and simpler, they result in an enhanced patient experience as well.

Our Surgical Kits streamline and simplify your implant procedures.

The adinguide™ was created with you in mind, bringing the guided surgery world to your clinic. The kits were specifically designed to support effortless procedures, accurate and predictable implant placement.

The ActiveFlow™ Irrigation Technology' is a unique design that forces coolant through the guide to ensure irrigation reaches the bone and prevents overheating.

The adinguide™ drills are designed with carved channels which allow saline coolant from your hand-piece to stream through the sleeve directly into the osteotomy site while drilling.

Our uniquely designed drill kit is intuitive and easy to use by implant diameter and length. The Tissue Punch and Pilot Drill allow for easy flapless access.

Keyless procedure enables easy handling and full visibility of surgical field.

**Self-centering drills** – controlled by a 5.5mm diameter cylinder at the top of each drill centers the drill in the guide's sleeve.

**Self-centering cylinder** engages the sleeve before the drill engages the osteotomy in order to ensure correct positioning of the drill.

**Built-in stoppers** – ensure precise and accurate drilling to the desired depth.

# Conical Connection

## ⓘ Conical Connection CloseFit™

When you're seeking to minimize micro movements between the dental implant and the abutment and to reduce potential bone loss, you'll benefit from Adin's CloseFit™ spiral implant system, which features an extremely strong, stable and solid conical-hex connection.

The CloseFit's tapered core implant includes a multi lead active & dynamic thread design. The unique design of the implant is suited for optimal repositioning at diverse angles within the lower and upper jaw. Designed for Subcrestal placement up to 1.0 - 2.0mm.

The CloseFit™ implants feature Adin's OsseoFix™ - A biocompatible surface treatment that uses gritting with Calcium Phosphate media that is debris free and has been designed to achieve the desired roughness levels needed for optimal osseointegration.

# CloseFit™ Narrow Implants

With more than 10 years of proven clinical experience, these uniquely designed small diameter implants of 2.75mm & 3.0mm, have an especially narrow body & collar to provide a perfect solution that addresses narrow ridges in atrophic jaws for exceptional esthetic's results.

The strong Conical Connection designed to minimize micro movements.

## UNP CloseFit™

## NP™ Impression

Recommended Torque 15(Ncm)

Our components for taking impressions for all restoration types can be successfully utilized for digital or conventional protocols either implant-level or abutment level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge or full mouth rehabilitation.

## TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations and may be used in combination with an implant level framework design.

The TMA™ system is used to elevate the restorative seating platform when restoration at implant level is not indicated or practical due to the depth or angle of the implant.

The TMA™ System is designed to allow better prosthetics access when using implants with divergent angles accommodate full and partial edentulous arches, especially when using angled implants and all-on-x technique for full arch restoration.

The TMA™ abutment system is available in straight or angled (17°, 30°, 45°), engaging the Conical Connection for indexing, with a selection of collar heights. Abutments are delivered with handles for easy insertion and to assist with seating.

## Drill Sequence

Recommended drilling speed up to 1200 rpm

The diagram illustrates two sets of dental implants side-by-side. Each set consists of a central screw and a top abutment. The left set, labeled 'hard bone', shows two implants: one with a diameter of Ø2.5 mm and another with Ø2.75 mm. The right set, labeled 'soft bone', also shows two implants of the same diameters. A vertical line separates the two sets. Asterisks (\*) are placed above the Ø2.5 implants in both sets, likely indicating a specific comparison or note.

All measurements are in mm.

\*Products may be ordered separately as an addition to the kit.

# CloseFit™

# Regular & Wide Implants

Our strong CloseFit™ Conical Connection is designed for optimal seating while reducing and virtually eliminating micromovements.

Appropriate for immediate function/loading capability in all bone types.

CloseFit™ implants are designed to be used in all indications and in all regions of the lower and upper jaws.

The back-tapered coronal portion is designed to reduce pressure and enable healthy cortical bone around the implant collar .

## RP™ Impression

Recommended Torque up to 15(Ncm)

Our components for taking impressions for all restoration types can be successfully utilized for digital or conventional protocols either implant-level or abutment level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge or full mouth rehabilitation.

## TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations and may be used in combination with an implant level framework design.

The TMA™ system is used to elevate the restorative seating platform when restoration at implant level is not indicated or practical due to the depth or angle of the implant.

The TMA™ System is designed to allow better prosthetics access when using implants with divergent angles accommodate full and partial edentulous arches, especially when using angled implants and all-on-x technique for full arch restoration.

The TMA™ abutment system is available in straight or angled (17°, 30°, 45°), engaging the Conical Connection for indexing, with a selection of collar heights. Abutments are delivered with handles for easy insertion and to assist with seating.

## WP™ Impression

Recommended Torque 15(Ncm)

Our components for taking impressions for all restoration types can be successfully utilized for digital or conventional protocols either implant-level or abutment level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge or full mouth rehabilitation.

## TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations and may be used in combination with an implant level framework design.

The TMA™ system is used to elevate the restorative seating platform when restoration at implant level is not indicated or practical due to the depth or angle of the implant.

The TMA™ System is designed to allow better prosthetics access when using implants with divergent angles accommodate full and partial edentulous arches, especially when using angled implants and all-on-x technique for full arch restoration.

The TMA™ abutment system is available in straight or angled (17°, 30°, 45°), engaging the Conical Connection for indexing, with a selection of collar heights. Abutments are delivered with handles for easy insertion and to assist with seating.

## Tri-Step & Twist Step Surgical Drills

Our DLC (Diamond Like Carbon) Tri-Step/Twist Step Surgical Drills are uniquely designed and coated to improve the surgical drilling process.

Tri-Step & Twist-Step DLC drills simplify the cutting process, save time and minimize risks.

Our improved DLC drill coating provides state-of-the art hardness and slickness that increases lifespan of the drill, maintains sharpness for extended drilling and generates less heat, thereby reducing chances of heating the bone or complications arising from conventional drilling protocols.

The drills come in the following diameters: 2.0, 2.5, 2.8, 3.2, 3.6, 4.2, 4.6, 5.2, 5.6

Specially designed for Adin's implants and suitable for their simple and convenient drilling protocol. They are clearly and conveniently marked and can be used with or without drill stops.

### Tri-Step drills

Adin's Tri-Step drills condense drilling protocols and avoid the need for using multiple drills throughout complex procedures.

Because friction at the cutting site is reduced, complications common with high speed drilling are decreased and faster & better recovery can occur.

## Surgical Kits Conical connection

Successful surgical procedures start with having the right instruments and tools to ensure your desired treatment outcomes are met.

That's why our range has everything you need, including drills, keys, ratchets and insertion tools. Not only do they make procedures safer and simpler, they result in an enhanced patient experience as well.

Our Surgical Kits streamline and simplify your implant procedures.

The adinguide™ was created with you in mind, bringing the guided surgery world to your clinic. The kits were specifically designed to support effortless procedures, accurate and predictable implant placement.

The ActiveFlow™ Irrigation Technology' is a unique design that forces coolant through the guide to ensure irrigation reaches the bone and prevents overheating.

The adinguide™ drills are designed with carved channels which allow saline coolant from your hand-piece to stream through the sleeve directly into the osteotomy site while drilling.

Our uniquely designed drill kit is intuitive and easy to use by implant diameter and length. The Tissue Punch and Pilot Drill allow for easy flapless access.

Keyless procedure enables easy handling and full visibility of surgical field.

**Self-centering drills** – controlled by a 5.5mm / 3.3 mm / 2.0 mm diameter cylinder at the top of each drill centers the drill in the guide's sleeve.

**Self-centering cylinder** engages the sleeve before the drill engages the osteotomy in order to ensure correct positioning of the drill.

**Built-in stoppers** – ensure precise and accurate drilling to the desired depth.

## CAD CAM

Adin's CAD - CAM components and digital libraries enable dental clinicians and technicians to design and manufacture state-of-the-art restorations supported by Adin's implants, using current and up-to-date digital restoration processes.

The variety of components ensure endless restorative options for treatment of single, multiple, partially, or full edentulous cases.

# One™

One piece implants

One piece implants

# One™

i:2.4

Our One™ implant system is a unique Monoblock solution designed for fast, convenient and immediate restoration, with minimal or no abutment preparation.

Featuring an integrated superstructure, the system's main advantage is the complete elimination of microbial leakage and colonization between implant and abutment, which leads to minimal gingival resorption.

One™ narrow diameter implants are also highly suitable replacements for sites with limited interdental dimensions, such as maxillary lateral and mandibular incisors.

Implant packed with

Here's  
how the  
process  
works

Each Drill Stops is marked with width and length,  
note that some are suitable for long and short drill according to the following:  
L: Drill length for long drill (18 mm)  
S: Drill length for short drill (13 mm)
